

Digital Fabric Maintenance application

Your corrosion treatment can't end in a report

Traceable and auditable coating management process, including:

- All the critical corrosion points mapped and classified.
- Integrity notes generation on SAP or other CMMS systems.
- Support for structural integrity and maintenance plans.
- Full coating plan with components, areas, locations and prioritizations.

Targeted to: Oil and Gas Platforms | FPSOs | Refineries

Benefits Overview

FPSO | Topside | 180,000m² | 10 years | 6 days x 1 People on Board | 30 days to deliver results

ROI of 456% Return on Investment in a 3-year campaign

90 POB days saved by FPSO per year

+900 man/hour saved by FPSO per year

254% more anomalies detected

Internationally awarded solution

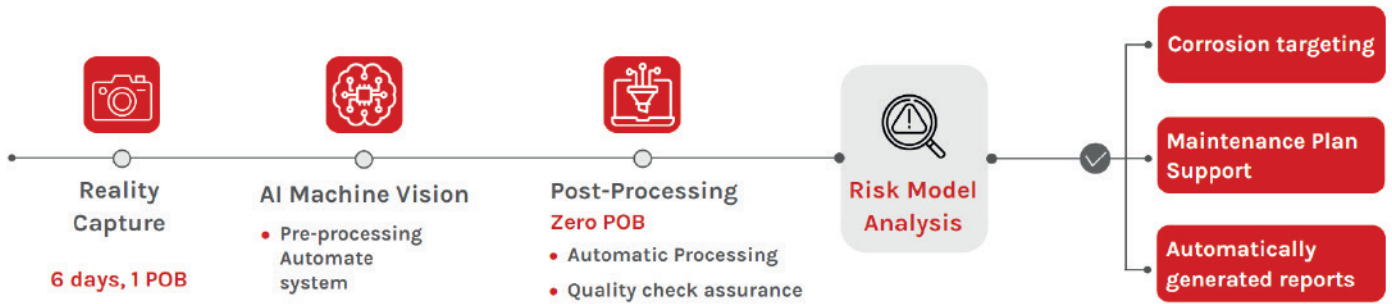

2X AWARDED AT

FINALIST AT THE CORROSION INNOVATION

How we fulfill the integrity assessment in just **30 days**?

Successful Customer Case

Challenges

- Many areas involved in the inspection planning process
- Data diffused in multiple non-integrated data sources with lack of historical data
- Exposure to hazardous environments due to the necessity of People on Board
- High maintenance and rework costs
- Large number of assets and equipments to be inspected

Results

- 🕒 More agility and precision in the coating management process
- 📋 Control over planned maintenance and budget spent on coating management tasks
- 💰 Savings in POB, rework, and M/H planning for coating activities per year
- 👤 Reduction of 90 days of People on Board per year on FPSO for corrosion assessment
